

Tools that expose missing information

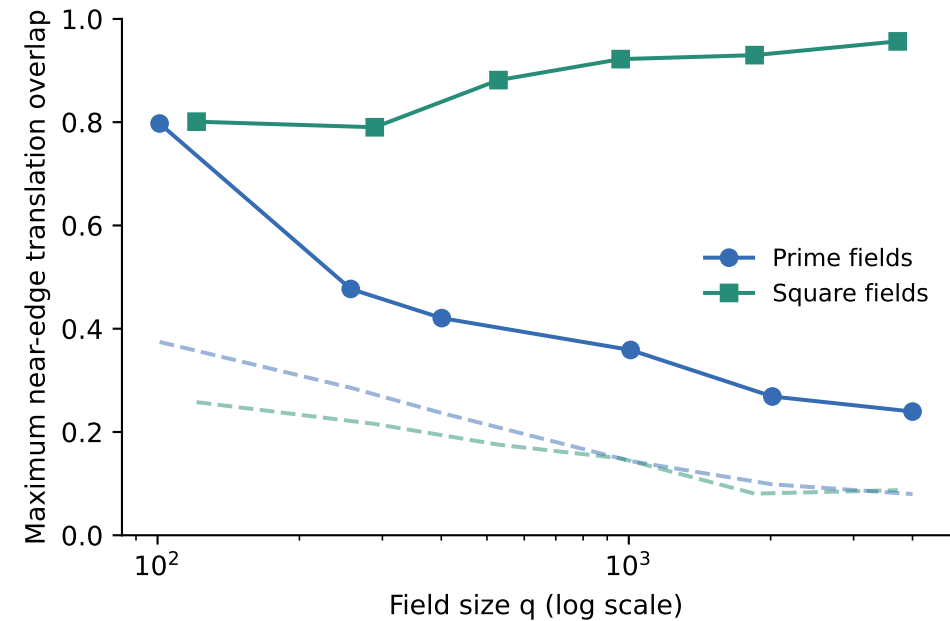

Exact finite experiments and numerical discovery · September 5, 2026

A Refine the measurements

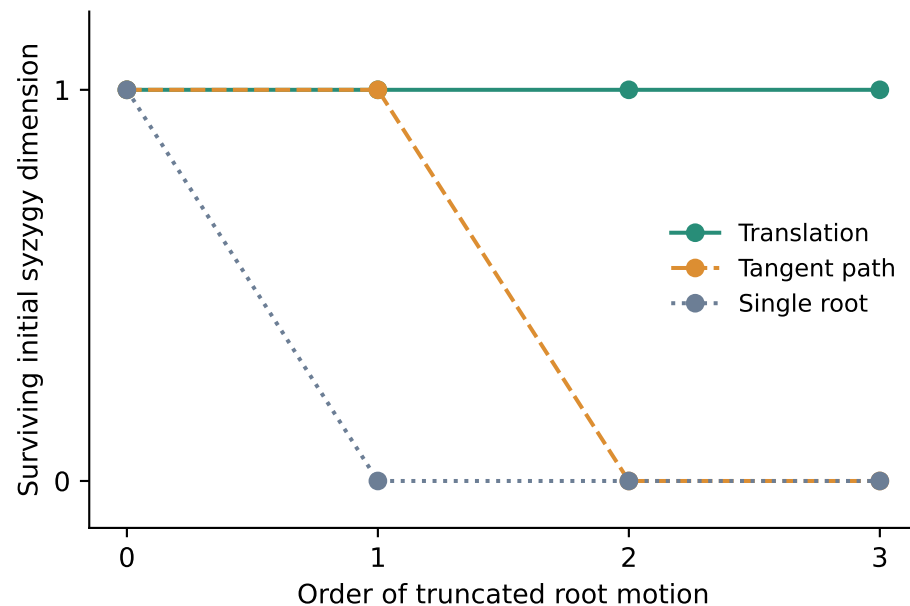

All 455,126 normalized six-sets in F_{61} .
Zero collisions here is not a universal determination theorem.

B Keep arithmetic coordinates

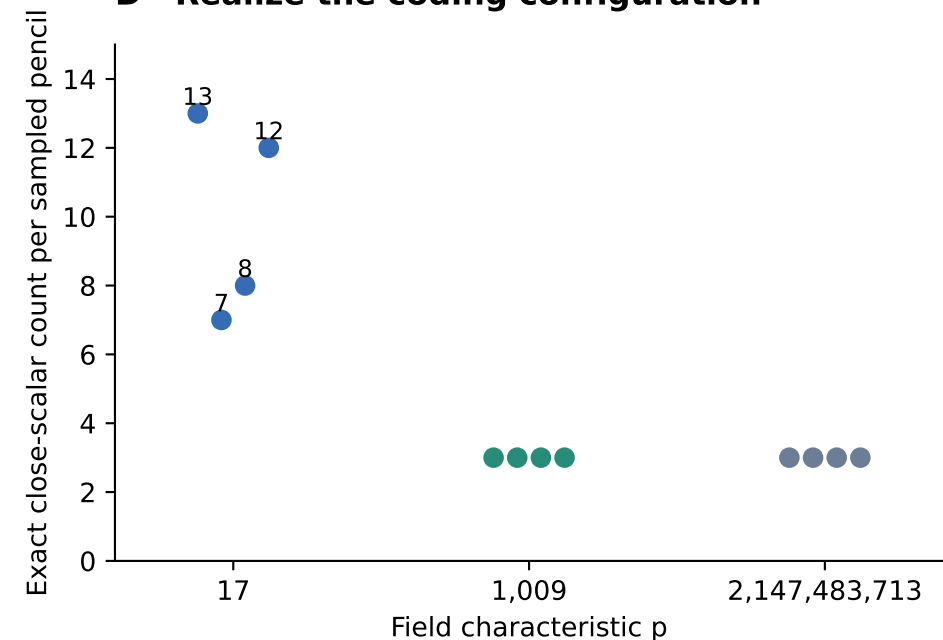

Solid: original operator. Dashed: same-spectrum relabelling.
Floating-point discovery; integer witnesses replayed separately.

C First order can miss failure

Known F_{41} witness. All 24 tested tangent paths die at order two.
Ambient straight paths; subgroup admissibility is tested separately.

D Realize the coding configuration

Same coset construction; $n=16$, $k=8$, agreement threshold=11.
Four seeded pencils per field. No worst-case or prize count claimed.
